PROFESSIONAL SUMMARY

AI-native Product Designer with 3+ years owning end-to-end UX/UI for multi-role SaaS, mobile, insurance/fintech, and enterprise products — from problem discovery and research through wireframes, high-fidelity design, prototyping, and post-launch iteration. Partners closely with Product, Engineering, and Business teams to translate complex user and business problems into impactful product solutions, and to build a scalable, AI-ready Figma design system (components, tokens, auto layout, documentation) used across three concurrent live products, running design-system audits to reduce design debt. Highly curious and experimentation-driven, applying Claude, Google Stitch, Figma Make, and UX Pilot alongside AIDLC-aligned practices to accelerate research, ideation, and prototyping, with a genuine interest in AI-first experiences — personalisation, conversational UX, and intelligent recommendations. Runs usability testing and accessibility reviews (WCAG 2.1 AA) before every release, letting quantitative and qualitative data drive every decision.

CORE COMPETENCIES

Product Design: End-to-End UX/UI, Problem Discovery, Wireframing, High-Fidelity UI, Interactive Prototyping, Information Architecture, Visual & Interaction Design

Design Systems: Component Libraries, AI-Ready Design Tokens, Auto Layout, Specs & Documentation, Debt Reduction, Governance, Design QA, Team Design Frameworks

AI-Enabled Design & AIDLC: Claude, Google Stitch, Figma Make, Figma AI, UX Pilot for rapid prototyping — applying AIDLC principles across discovery, design, prototyping, and dev handoff; curious explorer of AI agents, LLM-driven interaction patterns, and AI-first product experiences

Research & Validation: User Research, Usability Testing, Journey Mapping, User Flows, Data-Informed Iteration, Quantitative & Qualitative Insight Synthesis, Accessibility (WCAG 2.1 AA)

Collaboration & Influence: Agile/Scrum, Cross-Functional Partnership (Product, Engineering, Research, Data, Business), Design-to-Engineering Handoff, Stakeholder Immersion Sessions, Workshops, Case-Study Storytelling

Tools: Figma, Figma Dev Mode, Figma Make, FigJam, Framer, Google Stitch, Claude, ChatGPT, Perplexity, Stark & other Figma plugins, Photoshop, Canva

PROFESSIONAL EXPERIENCE

UI/UX Designer & Product Designer

Jul 2025 – Present

Magnumsoft Engineering Pvt. Ltd. (formerly Ira Technologies), Noida · Custom Web & Mobile Applications

- Own end-to-end product design for Virtual Waiter, a multi-role restaurant SaaS platform (admin, manager, chef, runner) — from problem discovery and research through wireframes, high-fidelity UI, and post-launch iteration.
- Designed a plan-configuration interface for Ericore, an insurance-sector client (Gurugram), turning premium logic and eligibility conditions into combinable AND/OR rule flows — hands-on fintech/insurance (BFSI) design experience alongside core SaaS work.
- Ran usability testing that surfaced a 9-step order-and-payment workflow as a key pain point; redesigned it into a 4-step flow, cutting kitchen errors and order turnaround time.
- Designed a predictive inventory dashboard that cut stockout events by 62% in pilot testing, using data and user feedback to inform the design — documented as a case study for cross-functional and leadership review.
- Use Claude, Google Stitch, Figma Make, and UX Pilot alongside Figma to accelerate ideation and prototyping before committing to a direction; use Stark and other plugins to validate contrast and accessibility.
- Run design QA, accessibility reviews, and usability testing before every release, catching 3 critical navigation issues across two shipped apps; also designed multi-role workflows (owner, tenant, handyman) for a rental platform.

UI/UX Designer & Graphic Designer

Jan 2025 – Jun 2025

I Dont Blabber, Bengaluru · Marketing & Design Agency

- Owned user flows, wireframes, and production-ready UI through developer handoff in Agile sprints across EdTech and consumer accounts, presenting and defending design decisions directly to clients and stakeholders.
- Built and documented a shared Figma component library that stopped the team rebuilding components from scratch, improving design consistency and team efficiency; used Framer for interactive prototypes and micro-animations to secure stakeholder buy-in pre-development.

UI/UX Designer

Jan 2024 – Nov 2024

Parshi Emerging Technologies, Jaipur · EdTech & Enterprise Solutions

- Designed and managed three unrelated consumer products end-to-end at once — a skincare app, a productivity app, and a smart-home/IoT control app — each with its own users, logic, and edge cases.

UI/UX Design Intern

Feb 2023 – Dec 2023

CAD Desk, Jaipur · CAD Software Training & Product Company

- Translated a real bakery client's ordering requirements into user flows, wireframes, and a working prototype — first end-to-end design for an external stakeholder.

EDUCATION

B.Tech, Electrical Engineering — First Class

2016 – 2020

Swami Keshvanand Institute of Technology (SKIT), Jaipur
